

## AMENDMENTS TO THE CLAIMS

shown in accordance with 37 CFR §1.121(c)

1. (currently amended) A roll-up portable valuables case holding a predetermined number of valuables including a security device for a portable valuables case, comprising:

- at least one battery,
- at least one light-responsive means installed in the portable valuables case for detecting a reduction in an amount of light falling on the portable valuables case and energized by said at least one battery upon control of a customizable key.
- a signal transmitter unit installed in said portable valuables case,
- a control device for said signal transmitter unit,
- a control means electrically connected to said at least one light-responsive means and arranged to control said signal transmitter unit,
- a remote receiving unit arranged to receive signals transmitted by said transmitter unit,
- an alarm system located in said remote receiving unit, and
- an alarm control means for said alarm system arranged to be controlled by said remote receiving unit and said control means to induce said alarm system to generate an alarm upon a reduction in an illumination level at said light responsive means and independently of whether all of the valuables are disposed in said portable valuables case.

2-7. (canceled)

8. (currently amended) ~~A security device~~ The roll-up portable valuables case according to claim 1, wherein said control means comprises a photocoupler including a diode and a transistor, said diode being connected to said at least one light-responsive means, said transistor being connected to a control device controlled by said photocoupler depending on the behavior of said light-responsive means.

9-11. (canceled)

12. (currently amended) ~~A security device~~ The roll-up portable valuables case according to claim 1, wherein said control means comprises an operational amplifier.

13. (currently amended) ~~A security device~~ The roll-up portable valuables case according to claim 12,

wherein said control device comprises another operational amplifier.

14. (currently amended) ~~A security device~~ The roll-up portable valuables case according to claim 1, comprising a sequencer means.

15. (currently amended) ~~A security device~~ The roll-up portable valuables case according to claim 14, wherein said sequencer means comprises two logic NAND-type ports.

16-17. (canceled)

18. (currently amended) ~~A security device~~ The roll-up portable valuables case according to claim 1, wherein said at least one light-responsive means comprises a battery charge detection circuit indicating the battery charge level.

19. (canceled)

20. (currently amended) A roll-up portable valuables case holding a predetermined number of valuables including a security device ~~particularly suitable for a portable valuables case,~~ comprising:

- at least one electric power source;
- an alarm system electrically connected to said power source, said alarm system comprising at least one light-responsive means that is installed in the portable valuables' case for detecting a reduction in an amount of light falling on the portable valuables case and is energized by said electric power source upon control of a customizable key and by a reduction in environment lighting levels, thereby generating at least one control signal for energizing said alarm system; and
- a battery charge detection circuit indicating a charge level of said electrical power source.

21. (currently amended) The roll-up portable valuable case ~~A security device~~ according to claim 20, further comprising:

- a signal transmitter unit installed in said portable valuables case;
- a control device for the signal transmitter unit;
- a control means electrically connected to said at least one light-responsive means and arranged to control said signal transmitter unit;
- a remote receiving unit arranged to receive signals transmitted by said transmitter unit;
- an alarm system located in said remote receiving unit, and

- an alarm control means for said alarm system arranged to be controlled by said remote receiving unit and the control means.

22. (currently amended) A roll-up portable valuables case holding a predetermined number of valuables including a security device particularly suitable for a portable valuables case holding a predetermined number of valuables, comprising:

- at least one battery mounted to the portable valuables case;
- at least one light-responsive means installed in said portable valuables case for detecting a reduction in an amount of light falling on the portable valuables case and energized by said at least one battery upon control of a customizable key;
- an alarm system; and
- control means operatively connected to the at least one light-responsive means and said alarm system for controlling same to emit an alarm upon a reduction in the amount of light falling on said at least one light-responsive means and independently of whether all of the valuables are disposed in said portable valuables case.

23. (currently amended) The roll-up portable valuables case security device according to claim 22 wherein said alarm system includes an alarm signal generator remotely disposed relative to said valuables case.

24. (currently amended) The roll-up portable valuables case security device according to claim 23 further comprising:

- a signal transmitter unit installed in said portable valuables case;
- a remote receiving unit arranged to receive signals transmitted by the transmitter unit, said alarm system being located in the remote receiving unit.
